Clean Air Tests

 <u>Laboratory test</u>		HC	CO	NO _x	PN
8.3/9	Cold Test*				
3.0/3	Warm Test [#]				
3.0/3	Eco Mode [#]				
3.0/3	Sport Mode [#]				
7.0/9	Highway [#]				
 <u>Road test</u>					
7.0/7	On-Road Drive*				
 <u>Robustness</u>					

* Adapted regulatory test # Additional Green NCAP tests

Comments

The up! shows good or adequate control of pollutant emissions in most of the tests. In the high-load highway test, control of particulate number is marginal and that of carbon monoxide is weak.

Comments

The up! has adequate energy efficiency in most tests. In the high-load highway test, efficiency is rated as marginal.

Our verdict

The up! tested here is the GTI with a one-litre turbocharged engine, equipped with a three-way catalyst and a gasoline particulate filter to control pollutant emissions. The Clean Air Index of 9.2 shows that these measures work well. In the high-load highway test, control of carbon monoxide is weak, but in the other lab tests, and during the on-road drive, control of pollutant emissions is almost entirely good. Energy efficiency is generally adequate in the lab tests but is marginal in the high-load test. Overall, the up! GTI achieves a very creditable four-star rating with good energy efficiency and pollutant control.
